

COMPLEMENTARY & ALTERNATIVE MEDICINE SHORT-TERM RESEARCH ROTATION (CAMSTRR)

The Texas College of Osteopathic Medicine (TCOM)'s CAMSTRR is a newly-founded elective research rotation open to third and fourth year medical students. The application process begins during medical school Year Two. CAMSTRR is a joint initiative of the University of North Texas Health Science Center (UNTHSC) and TCOM and is funded by the National Center for Complementary and Alternative Medicine branch of the National Institute of Health (NIH).

The specific goals of CAMSTRR are to provide an intensive eight-week elective that includes didactics and a mentored and hypothesis-driven research experience. Ultimately, we hope to encourage medical students to enter the complementary and alternative medical research field through this opportunity.
